

# Redmond Preferred Pumper Program

## Fats, Oils and Grease (FOG) Removal

The Preferred Pumper Program is a voluntary program for grease trap/interceptor pump-out companies that agree to meet certain criteria and best management practices established by the City of Redmond. Standardized procedures increase the likelihood that grease traps/interceptors are cleaned correctly, and reduce fats, oils and grease (FOG) in the sewer system, and provide a higher value service to the Food Service Establishment (FSE).

Pumpers registered with the Preferred Pumper Program certify that they will follow pump-out criteria and best management practices. The City of Redmond encourages Food Service Establishments in Redmond to use a preferred pumper. Owners of grease traps/interceptors using a registered preferred pumper can be confident that grease trap/interceptor cleaning will be completed correctly in accordance with industry standards. When an FSE uses a registered preferred pumper, the pumper assumes responsibility for completing and submitting required notifications and Interceptor Cleaning Reports to the City.

## Preferred Pumper Program Criteria

The preferred pumper agrees to:

- Submit a list of facilities pumped out on a regular basis
- Accurately complete the Interceptor Cleaning Reports and submit them to the respective municipality and to the FSE in a timely manner
- Perform interceptor cleaning that meets City inspection standards

## Preferred Pumper Program Benefits

- FSEs and FOG generators have easy access to the list of registered preferred pumpers.
- Preferred pumpers will use standard registration and Interceptor Cleaning Report forms for the City of Redmond.
- Preferred pumpers are responsible for completing and submitting Interceptor Cleaning Reports, providing more value to the FSE customer.
